BREAKING NEWS

BREAKING – 30,305 people died within 21 days of having a Covid-19 Vaccine in England during the first 6 months of 2021 according to ONS data

BY DAILY EXPOSE ON SEPTEMBER 15, 2021 • (46 COMMENTS)

Office for National Statistics data has inadvertently revealed that 30,305 people have died within twenty-one days of having a Covid-19 vaccine in England during the first 6 months of 2021.

Dozens of freedom of information requests (https://www.whatdotheyknow.com/request/deaths_for_any_reason_within_28_34) have been made to Public Health England (PHE) over the past few months requesting to know how many people have died within 28 days of having a Covid-19 vaccine, but each and every time PHE have claimed they do “not hold the information requested”.

Less than 0.1% of people reading this will support us even though we rely solely on your support. But if every single person reading this supported us today then we could remove this annoying banner as The Exposé would be fully funded for the next year...

receiving the vaccination against coronavirus, for any reason, in England only.

Please can this include the dates from the start of the vaccination roll out to today's date, 29th April 2021.

Yours faithfully,

FOI, Public Health England 14 May 2021

OFFICIAL

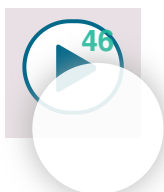

Dear Fiona Marshall,

Public Health England can confirm that it does not hold the information you have requested.

Source

It is extremely strange to find that PHE do not hold the information considering their counterpart in Scotland has been able to publish the data on deaths within 28 days of a Covid-19 vaccination.

Public Health Scotland last published the figures (https://beta.publichealthscotland.scot/media/8183/21-06-23-covid19-publication_report.pdf) on the 23rd June 2021 in their 'Covid-19 Statistical Report' (https://beta.publichealthscotland.scot/media/8183/21-06-23-covid19-publication_report.pdf) in which they revealed 5,522 people had died within 28 days of having a Covid-19 vaccine between December 8th 2020 and June 11th 2021 in Scotland.

Public Health Scotland

Between 8 December 2020 and 11 June 2021, a total of 5,522 people died within 28 days of receiving a COVID-19 vaccine in Scotland (number of days between vaccine and death is 0-27, where 0 is the day of vaccination, all age groups). A breakdown of these deaths by day and vaccine type is available in the [spreadsheet](#) provided along with this report.

having the Pfizer mRNA jab, 3,643 people died within 28 days of having the AstraZeneca viral vector jab, and 2 people died within 28 days of having the Moderna mRNA jab.

The reason people have been requesting to know the number of people to have died within 28 days of having a Covid-19 vaccine is because these are the exact same parameters that have been used to count alleged Covid-19 deaths for the majority of the alleged pandemic.

Deaths are counted as Covid-19 if they occur within 28 days of a positive test, however, in the beginning they were actually counting deaths as Covid-19 if they occurred within 60 days of a positive test.

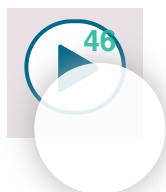

But it would seem PHE have been able to elude the requests made for the number of people who have died after having the Covid-19 jab thanks to a technicality. That technicality being the number of days used in their request, because we have discovered that they do hold the data on the number of people to have died after having a Covid-19 injection.

But it isn't the number of people who have died within 28 days, it is instead the number of people who have died within 21 days of having a Covid-19 vaccine, and the figures have just been published inadvertently by the Office for National Statistics.

A report published by the ONS

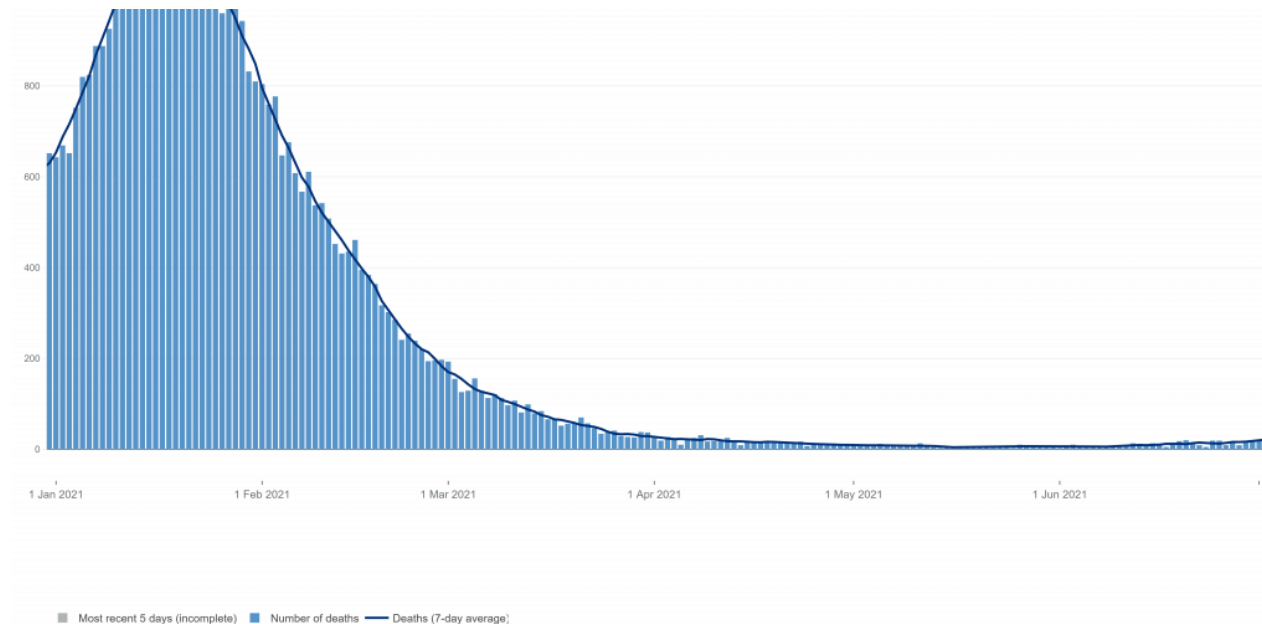

(<https://www.ons.gov.uk/peoplepopulationandcommunity/birthsdeathsandmarriages/deaths/articles/deathsinvolvingcovid19byvaccinationstatusengland/deathsoccurringbetween2januaryand2july2021>) on September 13th 2021 was a clear attempt to dupe the public into believing the majority of Covid-19 deaths are occurring among the unvaccinated population. But the date parameters used in their report include a huge swathe of deaths that occurred during the second alleged wave of Covid-19 in January 2021, when barely anybody was vaccinated.

The cut off point was also the 2nd July 2021, meaning deaths that have occurred during the summer third wave that we are currently experiencing have not been included.

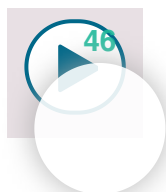

Less than 0.1% of people reading this will support us even though we rely solely on your support. But if every single person reading this supported us today then we could remove this annoying banner as The Exposé would be fully funded for the next year...
(<https://theexpose.uk/2021/10/01/october-fundraising-campaign/>)

[Donate](#)

As you can see from the above graph taken from the [UK Governments Covid-19 Dashboard](https://coronavirus.data.gov.uk/details/deaths) (<https://coronavirus.data.gov.uk/details/deaths>), the vast majority of Covid-19 deaths during the period used in the ONS report occurred during the second wave when the vaccine programme had only just begun, so of course the vast majority of deaths occurred among the unvaccinated population.

However, if ONS had decided to cover the third wave that we are currently experiencing then you would have seen that 75% of people who have died with Covid-19 were in fact vaccinated, and just 25% of people who have died were not vaccinated.

Less than 0.1% of people reading this will support us even though we rely solely on your support. But if every single person reading this supported us today then we could remove this annoying banner as The Exposé would be fully funded for the next year...

Death within 28 days of first positive COVID-19 test by date of death between week 32 and week 35 2021	Total	Unlinked*	Not vaccinated	Received one dose (1-20 days before specimen date)	Received one dose, ≥21 days before specimen date	Second dose ≥14 days before specimen date	Rates among persons vaccinated with 2 doses (per 100,000)	Rates among persons not vaccinated (per 100,000)
Under 18	3	0	3	0	0	0	0.0	0.0
18-29	18	1	13	0	1	3	0.1	0.4
30-39	45	2	31	0	4	8	0.1	1.0
40-49	93	3	54	0	9	27	0.4	3.1
50-59	191	3	100	0	17	71	1.0	9.7
60-69	332	7	115	2	14	194	3.4	21.2
70-79	580	2	129	1	20	428	9.2	52.1
80+	1,119	7	155	3	26	928	36.0	121.5

Table 5 of Public Health England's 'Vaccine Surveillance Report' found [here](https://assets.publishing.service.gov.uk/government/uploads/system/uploads/attachment_data/file/1016465/Vaccine_surveillance_report_-_week_36.pdf)

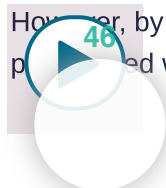

(https://assets.publishing.service.gov.uk/government/uploads/system/uploads/attachment_data/file/1016465/Vaccine_surveillance_report_-_week_36.pdf), shows that between August 9th and September 5th 2021 there were 600 Covid-19 deaths among the unvaccinated population, 97 deaths among the partly vaccinated population, and 1,659 deaths among the fully vaccinated population.

So as you can see the vast majority of deaths during this current wave of Covid-19 are occurring among the vaccinated population, but of course ONS didn't want you to know that so they left it out. But we bet they didn't plan on revealing the number of people who have died within 21 days of having a Covid-19 vaccine like they have.

Table 1 of the ONS report (found [here](https://www.ons.gov.uk/peoplepopulationandcommunity/birthsdeathsandmarriages/deaths/articles/deathsinvolvingcovid19byvaccinationstatusengland/deathsoccurringbetween2januaryand2july2021)

(https://www.ons.gov.uk/peoplepopulationandcommunity/birthsdeathsandmarriages/deaths/articles/deathsinvolvingcovid19byvaccinationstatusengland/deathsoccurringbetween2januaryand2july2021)) is an attempt to show how well the Covid-19 vaccines have been at preventing deaths. But don't forget they've only covered the first 6 months of the year where the vast majority of deaths occurred when the majority of the population were not vaccinated.

However, by attempting to dupe the public into believing the Covid-19 vaccines have worked at preventing deaths the ONS have revealed that 30,305 people died within 21 days of having a Covid-19 vaccine in England between January 2nd and July 2nd 2021.

deaths occurring between 2 January and 2 July 2021

Vaccination status	Deaths involving COVID-19	Non-COVID-19 deaths	Percent of all deaths
All deaths regardless of vaccination status	51,281	214,701	19.3
Unvaccinated	38,964	65,170	37.4
Deaths within 21 days of first dose	4,388	14,265	23.5
Deaths 21 days or more after first dose	7,289	66,533	9.9
Deaths within 21 days of second dose	182	11,470	1.6
Deaths 21 days or more after second dose	458	57,263	0.8

Source: Office for National Statistics – National Immunisation Management Service, NHS Test and Trace

As you can see above 14,265 people died within 21 days of having the first dose of a Covid-19 vaccine, and 4,388 people died within 21 days of having the first dose of a Covid-19 vaccine whose death allegedly involved Covid-19.

Another 11,470 people died within 21 days of having their second dose of having a Covid-19 vaccine, and 182 people died within 21 days of having their second dose of a Covid-19 vaccine whose death allegedly involved Covid-19.

The 30,305 people died within 21 days of having the Covid-19 vaccine in England during the first 6 months of 2021.

What's interesting to note here is that a further 123,796 people died 21 days or more after having the Covid-19 vaccine, and we're very eager to know how many of those occurred up to 28 days after being vaccinated, or even 60 days after being vaccinated considering they have and still do use this parameter to count Covid-19 deaths.

But for now we will have to settle for knowing the official number of people to have died in England within 21 days of having a Covid-19 vaccine during the first 6 months of 2021, and that number is 30,305, and we doubt it's a number the authorities actually wanted us to know.

Do we know how many died in Scotland within 21 days of a jab?

If so, we would have enough data to make a good estimate of the 0-28 day jab deaths in England (and UK).

No, but the 28 days data for Scotland should be useful enough to estimate 28 days for England.

This is all meaningless unless we know the cause of death and ages of those who died within 21 days of being stuck with the poison. The majority of these *could* be natural causes due to old age for all we currently know. During a normal year, 1700+ people die in the UK every day of any cause you wish to name. It's no surprise that 30300 have died over six months within 21 days of being jabbed. Under normal circumstances, I'd have expected an average of 250000 people to have died during a 6 month period.

Total UK deaths in 2019 were ~530k. We'd therefore expect to see an average 30577 deaths in any 3 week period.

Why, then, without causality data, is 30305 deaths within three weeks of a vaccine the horror story your article seeks to suggest?

Puzzled. Questioning everything at the moment.

I think I understand your question, and I have thought about this as well, but I still believe the data presented here shows an increase in the number of deaths one would expect.

One would expect to see around 30,000 if looking at the ENTIRE population, yet here we see 30,000 only in the much smaller group of people who happened to be vaccinated in the past 21 days.

I wish I could better explain this, but if we assume ALL the deaths were not related to the vaccine that would mean for 21 days the only people dying had just been vaccinated and we know that is not the case.

You can get a breakdown of the raw data here:

<https://www.ons.gov.uk/peoplepopulationandcommunity/birthsdeathsandmarriages/deaths/articles/deathsinvolvingcovid19byvaccinationstatusengland/deathsoccurringbetween2januaryand2july2021/relateddata>
(<https://www.ons.gov.uk/peoplepopulationandcommunity/birthsdeathsandmarriages/deaths/articles/deathsinvolvingcovid19byvaccinationstatusengland/deathsoccurringbetween2januaryand2july2021/relateddata>)

The data is broken down by each week with age-adjusted death rates for each group (so you can compare like-with-like). The Covid death rate among the unvaccinated is higher than the <21 days 1st dose group for EVERY single week, while the weekly Covid death rate for people who've had 2 doses (<21 and ≥21 is combined due to low numbers) is practically zero throughout, even when the death rate among the unvaccinated group is peaking.

These are the weekly age-adjusted Covid death rates (per 100k) for the week ending 29th Jan, when the unvaccinated death rate peaks:

Unvaccinated: 56.2

<21 days 1st dose: 5.5 (peaks w/e 5th Mar at 6.9)

≥21 days 1st dose: 6.9 (peaks w/e 5th Jan at 11.4)

After 2nd dose: 0.5 (peaks w/e 12th Mar at 0.7)

It certainly suggest the vaccine is very effective at reducing Covid deaths, even from the 1st dose. Of course, the suspicion among certain groups is that the vaccine is killing more than it saves so it's important to also look at the non Covid deaths.

Donate

(https://theexpose.uk/2021/10/01/october-fundraising-campaign/)

which might be something to explore. Given that age has been factored out, it may be that there are other socio-economic factors that are keeping the death rate low for this group vs the unvaccinated group.

Lastly, there is a very clear but not obviously explained change in the non-covid death rate for ≥21 days 1st dose. This starts off quite low in January but by the end of May is peaking at four times the rate of any other group and then slowly declining again. Once again, since age has been factored out, it's not clear what's causing that but it is quite glaring and needs exploring.

You can view the raw data with the link above. I've also put the weekly age-adjusted death rates into a colour coded table for ease of viewing.

Doesn't this data need more context?

haven't experienced seasonal peaks seems unproductive.

Given the non-covid deaths, the intensity bands are shifting towards the vaccinated likely due to the total % of population transitioning their status.

Furthermore, i wonder why the clear trend of the >21D 1st dose are increasing in intensity and moving away from the baseline?

Does this suggest that some of the covid deaths are being classified as non-covid deaths??

Simon, your number includes all ages? The report above specifically is regarding those over the age of 16 and vaccinated, and specifically only England, so the population is smaller.

Are you saying, that if someone got the jab and dies within the first 14 days, they are not considered a casualty of the vaccine? If that is what you're saying and if it is infact true, then there are far more casualties from the vaccine than is recorded or that they plan to record in order to hide the true numbers

No, but this is a quiet suburban area with people I haven't seen masked even during the so called peak, my guess is that not many vaxxed.

Hypothetically, if you could invert the agenda of vaccines, you can be sure that the state and the media would have twisted the stats to 'prove' that there is a vaccine epidemic.

A number of people missing one of the key points being made here.. the numbers and methodology used are the same as numbers and methodology the governments/WHO are using to claim c19 deaths... died within x days of a positive test.. i.e. did they really die of covid..(?) did they really die of vaccine..(?) so, showing the stats are just finger in the air methodology.. = sham

Jon Rappoport published an article (<https://blog.nomorefakenews.com/2021/08/17/massive-fraud-in-reporting-vaccine-injuries-withheld-data-pretense-of-safe/>) on his blog.nomorefakenews site about research that shows as few as 1% of victims of the inoculation (it's not a vaccine) have their resultant harm or death reported. If true for these stats then over 3 million would be the true count.

Btw, the fake vaccine producers have admitted the inoculations neither cure nor prevent nor stimulate immunity to the Common Cold symptoms called COVID19. The symptoms result from EMF radiation poisoning by Telecom wifi frequencies and 'trade secret' toxin graphene oxide in the inoculation. (See orwell.city (<http://orwell.city>)) The best that can be done is to ease the symptoms and the inoculations don't even do that. From that perspective people are better off taking over the counter cold'n'flu that contains phenylephrine hydrochloride. Chlorine seems to be the magic bullet that calms the immune-repair-defence system (IRDS). Pneumonia is the IRDS Samson option to flush out bacteria and contaminants from the lungs.

The killer jabs cause sterilisation in both sexes, miscarriage in the majority of pregnancies, can cause polio (GB syndrome) and seemingly the full spectrum of harms ever caused by fake

NHS and some top brass should hang imo.

Germ theory has been falsified by Dr Lanka so vaccines for viruses has always been a confidence trick.

All four fake vaccine corporations are owned or controlled by Zionist Jews.

The Georgia Guidestones point to the ambitions of the psychopathic Rockefeller Foundation, Rothschilds' WEF, (Klaus is a Rothy) the Pilgrims Society and assorted others from military corporations (bioweapons) to eugenicists like Gates and Zio Jew Boris' father.

When the dust settles, if 7 bil get the vaxecution jab, 2 bil have been predicted to die. Some have called the jab an IQ test. Smart people find out what is in the serum and refuse it at all costs. That means the global IQ will be higher when the dust settles, and the survivors will have plenty of elbow room.

Never isolated...doesn't exist...no variants then....look up dr Stefan lenka...dr Andrew kauffman..dr tom cowans...virus insilico....created on a computer.....also the vax created on a computer with a part genomic sequence using a fake pcr test.
